

Network Auditing & Network Evaluation

RjPlace System Designs offers *network audits*, *network evaluations*, and *network consultations*. We understand that the health of your network is probably not your primary concern when running your business, which is why we make it our main primary concern. These evaluations, consultations, and audits are designed to help your organization. Your business strategies become most effectively aligned to your technology.

Network Evaluations, *Network Consultations*, and *Network Audits* require a breadth of knowledge, a wealth of experience, and a bundle of understanding to complete effectively. Knowing how to diagnose one type of problem may be effective sometimes, but knowing how to correct any network issue is priceless. Consistency and confidence make RjPlace System Design network engineers important to you.

RjPlace System Designs network engineers all have at minimum of 5–years of network experience. Ongoing training and continued Microsoft testing make the difference. Excellence in work habits, knowledge of current software and hardware changes, improvements to the security of your operation and most of all, the wiliness to listen and understand your needs.

Network Auditors additionally also have a minimum of 5–years hands on experience planning, analyzing, designing, implementing, and supporting data networks and security.
